

CV Website Development Report

Web Development Project

Daouda SENE

Introduction

This project consists of customizing and deploying a personal CV website using an HTML and CSS template. The goal was to create a modern and responsive online portfolio presenting my academic background, technical skills, and experiences in Data Science and Web Development.

Technologies Used

The website was developed using HTML5, CSS3, Bootstrap 4, JavaScript, jQuery, and Font Awesome Icons.

Project Structure

The website contains:

- Home section with animated introduction
- About section presenting my profile
- Education and Experience sections
- Portfolio section for projects
- Contact section with social media links

Customization

Several modifications were made:

- Added personal information and profile images
- Updated education and experience details
- Added Data Science, Machine Learning, and Mathematics skills
- Customized colors and navigation menu
- Integrated GitHub and LinkedIn links

Responsive Design

Bootstrap and CSS media queries were used to make the website compatible with desktop computers, tablets, and mobile phones.

GitHub Repository

The project was deployed on GitHub:

github.com/Daouda-sene/CV-Website

Conclusion

This project improved my frontend web development skills and helped me better understand responsive website customization and GitHub deployment.
